

CAPRA
FLEXIBLE PROTECTION

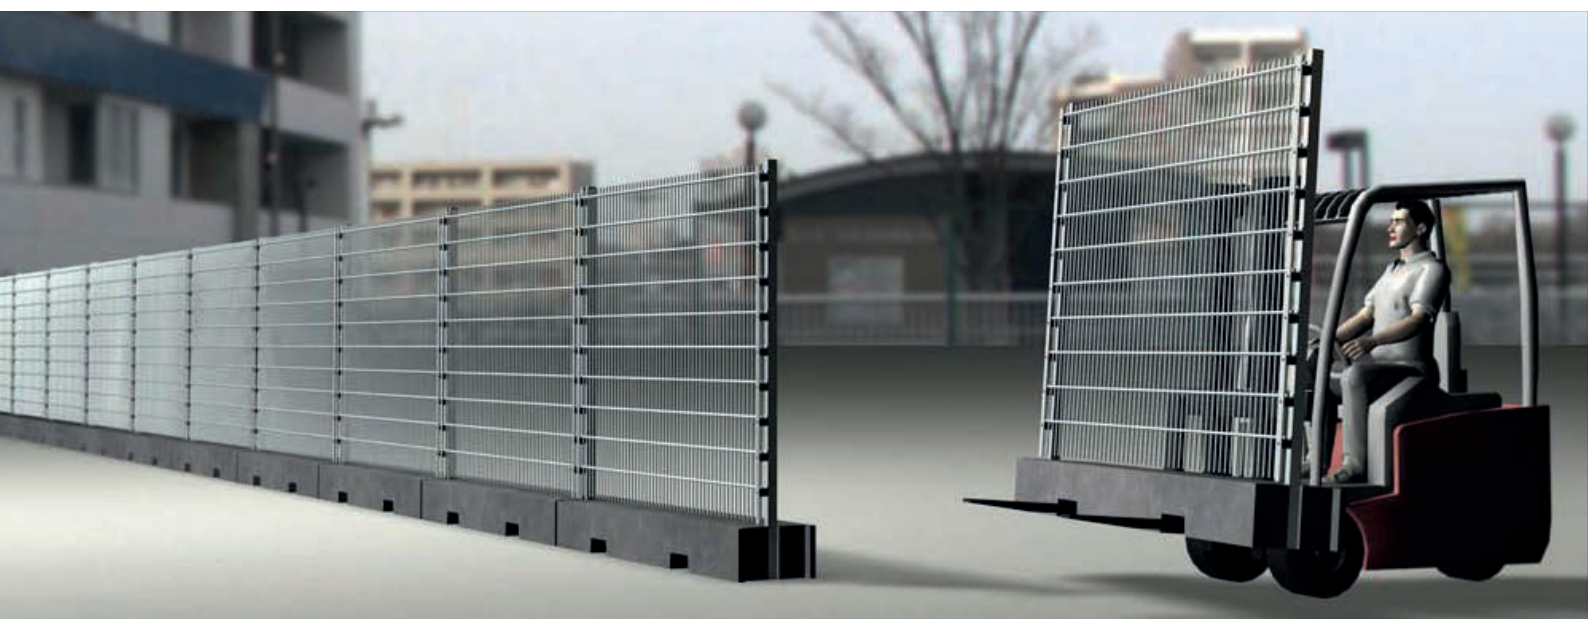

CAPRA FLEXIBLE PROTECTION

FULL PROTECTION OF AREAS AND FLEXIBILITY AT THE SAME TIME – THE NEW SOLUTION.

Is this familiar to you? Construction sites, external warehouses, port areas or events must be secured or fenced flexible and individually.

But what if the usual solution with unstable and easily to overcome fences is not enough?

CAPRA Protection offers a whole new solution: the flexible and mobile security fence.

VERSATILE APPLICATIONS

CAPRA Protection shows its advantages everywhere where sites or areas need to be massively secured within a short space of time. The mobile security fence system is set in place by fork-lift trucks so

that it meets the currently required needs.

The only condition is a levelled surface.

Possible application areas are:

Harbours and airports

Flexible security of freight and transport areas. CAPRA fulfills ICAO and ISPS requirements.

Events

Used to adapt event locations and crowd control.

Construction sites and warehousing

Used to secure building sites and storages in all sizes.

Critical Safety Areas

Barriers for political events and for military, police and municipal use.

MASSIVE BUT MOBILE

You can place and remove our mobile security fences without great effort and use the system spontaneously or for the long term. Our elements are based on a solid, 810 kg concrete base, which can be easily moved and set with a forklift truck. Place the single elements at the desired location.

Thanks to its patented “interlocking system” on the concrete base, CAPRA Protection ensures that the elements interlock and are immovable. If the system is to be used at a different location, the fence elements can also be loaded onto trucks and transported in larger quantities.

MAXIMUM SAFETY ACCORDING TO PATENTED PRINCIPLE

Maximum security according to a patented principle: CAPRA Protection offers the best protection, secure shielding and highest security - despite its flexibility and mobility.

Three main characteristics provide stability:

- ◆ the 810-kg concrete base
- ◆ the massive double bar panels are screwed tight and equipped with brackets on request
- ◆ our patented interlocking system ensures a stable meshing of the concrete base

The solid base in combination with the interlocking system make it almost impossible to move or to tear down the fence. The fence elements are also available with other fillings on request.

ASTONISHING FLEXIBILITY

You need to secure changing plots or building sites? You have to adapt your venue to a changing number of visitors? You have to increase or decrease your storage area or port facility depending to the freight traffic? With CAPRA, the mobile security fence system, the challenges will be mastered.

CAPRA Protection fence elements are deployed wherever maximum security and shielding are important and at the same time there is a need for short term changes and rearrangements in the perimeter. You can build your site fast and exactly according to your needs.

CAPRA FLEXIBLE PROTECTION

CAPRA VARIATIONS – THE CHOICE IS YOURS

You can select the fence elements according to your needs.

CAPRA PROTECTION DOUBLE

The basic option: our massive concrete block with a steel double wire panel.

CAPRA PROTECTION Y-BOOM

For maximum security in all directions:
Fence element with Y-Extension on top.

CAPRA PROTECTION GATES AND PASSAGES

Upon request we can offer CAPRA mobile security fence gates and passages.

CAPRA PROTECTION BOOM

The fence element with additional bent arm at the top for more security.

CAPRA PROTECTION DETECTION

Complete your security fence with a unique detection system to react faster on climbing over attempts.

CAPRA PROTECTION INDIVIDUAL

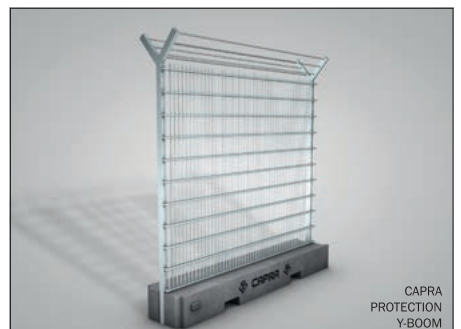

- ◆ Color your fence element with all possible RAL-Colors.
- ◆ Higher security: equip your Y-Boom extension with NATO wire
- ◆ For your special requests or special requirements we offer tailor made solutions.
